

Box Bar Angus Ranch(Bill Coventry)

Sale Order

March 3/2023 @ 1pm

Complete Commercial Herd dispersal. All these bred females and replacements trace back to Annie K cow family. The Annie K cow family is widely known for its productive females. Females with great conformation, milk, longevity, mothering ability, and breeding back (under harsh conditions)

The main herd is calved on a section of native prairie. The heifers are kept in a corral and calved under camera, we touch less than 2% of these girls on an annual basis. Generally calve 70-80% in the first cycle, the open rate is less than 3% annually. (Bred heifers exposed to a proven heifer bull)

Cattle have been on a ration of straw, hay, silage, and grain. 40% straw, 30% hay, 30% silage and 3lbs of grain.

Pre-breeding program Fermicon 7 and Pyramid 5P5 VL5. The cattle are given scour guard, within 30 days of calving, in great shape. The replacement heifers are on the same health program, they have had their spring and fall boosters.

Turn key cows, take 'em home, and let them do their thing. Cattle that it does not matter if they have a steer or a heifer calf. Steers stack up in the fall, and heifers you can back into the herd or bring to town and have buyers that want them.

Yellow & green tags were out of a purebred program. All sell as commercial no paper transfer.

2 of the herd bulls have sons in our 2023 private treaty Bull offerings.

100% of the replacement heifers from the 2022 crop are here today. Generally these heifers are sold off the Ranch every year. There are female cattle from this program from BC to Ontario.
